GSFC Validates/Guides Issues

- Both Validates EVP and Guide Spidex systems need better error messages/error traceback
- Validates EVP delete dataset has had problems
- Validates EVP response time is too slow and can be improved
- Would like to see EVP send a message to guide authors when validates are deleted

- Still need order size calculation or threshold information (EDG Issue)

- ❖ On the whole, we are pleased with both EVP and Spidex
 - ❖ Both systems offer much improved turnaround time and better control over document processing and updating
